

5 tips to make your cleaning more sustainable

To help make your cleaning processes more sustainable, here are 5 practical tips to make the change to greener cleaning.

1 Use concentrated products with a dosing & dispensing system

Spray bottles refilled over and over again can minimise plastic waste.

*above figures will always depend on the product

2 Use cleaning tools to minimise the use of chemicals

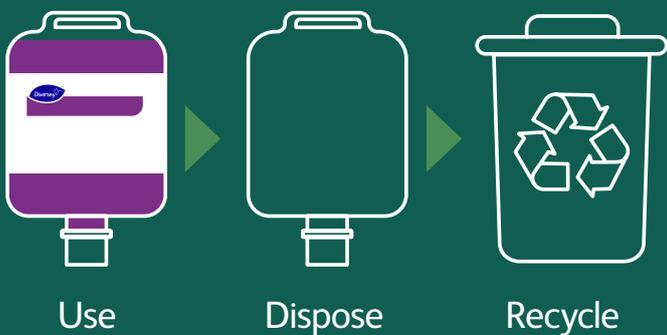

3 Use eco-certified products

Products with an EU Ecolabel have been assessed by an independent body in terms of durability. To get an EU Ecolabel, the entire chain of a product is looked at, not just raw materials and packaging. The most highly regarded eco-labels in the cleaning sector are EU Ecolabel (EUFlower), Swan and Cradle to Cradle.

4 Choose products in fully recyclable packaging made of mono-layer plastic

5 Use cleaning products made from renewable resources

Our SURE products like detergents and disinfectants for daily cleaning and hygiene are vegetable based and 100% biodegradable. Products contain ingredients derived from by-products of the agri-food industry, originating from sugar beet, maize, straw and coconut.

5 tips to make your cleaning more sustainable

The products in our “More than Green” range make your life easier. We have selected the most sustainable solutions in our portfolio for you so you can stay focused on your business, and we make sure your cleaning gets greener.

By choosing one of our “More than Green” solutions**, you can start reducing your carbon footprint and work more efficiently while cutting costs.

1 Use concentrated products with a dosing & dispensing system

Divermite®

Diverflow®

QuattroSelect®
